## **NOTITIE**

Normenkader codekwaliteit Centrale BRP-voorzieningen

Versie 1.1 vastgesteld stuurgroep Operatie BRP dd. 23-04-2015

**Datum** 15-04-2015

## **Inleiding**

Het doel van deze notitie is het vaststellen van het normenkader voor de codekwaliteit van de centrale BRP-voorzieningen en de migratievoorzieningen. Bij het opstellen van de notitie is gebruik gemaakt van het advies 'Kwaliteitsdoelen softwareontwikkeling' van KPMG aan opdrachtgever Operatie BRP van 2 december 2014. Verder is gebruik gemaakt van ISO norm 25010, die kwaliteitskenmerken van software beschrijft. In dit normenkader ligt de nadruk op de categorieën betrouwbaarheid, beveiligbaarheid en onderhoudbaarheid.

De norm geeft invulling aan een deel van de zogenoemde 'non-functional requirements' (NFR's) die door Agentschap BPR en andere partijen zijn opgesteld. Een groot aantal regels in deze norm draagt bij aan een of meerdere NFR's of vult deze volledig in¹.

Bij het vaststellen van het normenkader zijn de volgende partijen betrokken:

- 1. Gedelegeerd opdrachtgever Operatie BRP (als verantwoordelijke)
- 2. Project O&R (als uitvoerder)
- 3. Agentschap BPR (als toekomstig beheerder)
- 4. KPMG (vanuit zijn verantwoordelijkheid voor Quality Assurance rond de broncode)

<sup>&</sup>lt;sup>1</sup> Zie bijlage 3

De notitie is als volgt opgebouwd:

- 1. Procesinrichting
- 2. Afbakening
- 3. Normstelling
- 4. Omgang met uitkomsten beoordelingen en toetsen

## **Procesinrichting**

Het proces rond het normenkader bestaat uit de volgende onderdelen:

- Vaststelling en beheer van de norm
- Toepassing van de norm
- Toetsing van de norm

#### Vaststelling en beheer van de norm

De gedelegeerd opdrachtgever stelt de kwaliteitsnorm voor de code (deze notitie) vast in overleg met het project O&R in de rol van uitvoerder en het Agentschap BPR in de rol van toekomstig beheerder. KPMG geeft een kwaliteitsoordeel over de norm die de gedelegeerd opdrachtgever stelt, inclusief eventuele aanbevelingen. De gedelegeerd opdrachtgever legt expliciet vast welke aanbevelingen hij wel en niet in het normenkader verwerkt. Het project O&R maakt de kwaliteitsnorm, het oordeel van KPMG en de reactie van de gedelegeerd opdrachtgever over de aanbevelingen van KPMG openbaar.

Veranderingen van inzicht op het terrein van codekwaliteit kunnen leiden tot wijzigingsvoorstellen op de kwaliteitsnorm. Deze wijzigingen volgen hetzelfde proces als de vaststelling van de norm. Het project O&R bepaalt conform het reguliere wijzigingenproces na een besluit de impact van de wijziging op tijd en geld. De gedelegeerd opdrachtgever beslist of deze impact zodanig is dat hij het besluit over de wijziging van de kwaliteitsnorm aan de stuurgroep Operatie BRP voorlegt.

#### Toepassing van de norm

Het project O&R past de kwaliteitsnorm toe op alle code die door het project zelf wordt geproduceerd. De omvang daarvan wordt verder beschreven onder de kop Afbakening.

De toepassing van de kwaliteitsnorm krijgt concreet vorm door de inzet van de volgende producten:

- Findbugs
- PMD
- Checkstyle
- SonarQube

De controle op de kwaliteit van de code vindt zo vroeg mogelijk in het proces van het vervaardigen van code plaats. Dit betekent dat een programmeur na het invoeren van nieuwe regels code direct een terugmelding krijgt die aangeeft of de code aan de in de kwaliteitsnorm vastgelegde regels voldoet. Deze werkwijze is efficiënter en effectiever dan een werkwijze waarbij achteraf (bijvoorbeeld aan het eind van iedere dag) een batchgewijze toets plaatsvindt op de geproduceerde code, waarna de programmeur de volgende dag signalen krijgt over de onderdelen van de door hem geproduceerde code die niet voldoen aan de kwaliteitsnorm.

Het is mogelijk dat het oplossen van een situatie waarin niet wordt voldaan aan een specifieke regel uit het normenkader tot kwalitatief minder goede broncode zou leiden. Voor bepaalde normen<sup>2</sup> geldt daarom de regel 'Pas toe of leg uit'. Dit betekent dat per individuele afwijking van een bepaalde regel een uitleg ('explain') gedocumenteerd moet worden waarom de afwijking naar de mening van het project niet wordt opgelost. Het doel is om het aantal 'explains' zo laag mogelijk te houden. Monitoring en eerste inhoudelijke beoordeling van 'explains' is een taak van de ontwikkelteams.

#### Toetsing van de norm

Periodiek vindt een toetsing plaats door KPMG (verantwoordelijk voor Quality Assurance rond de broncode). Het doel hiervan is tweeledig:

- 1. toetsen in hoeverre de door het project geproduceerde code voldoet aan het gestelde normenkader;
- 2. bepalen of het proces van kwaliteitsborging nog steeds op orde is.

Daarmee wordt vervolg gegeven aan aanbevelingen op basis van de eerste toets door KPMG, en wordt gecontroleerd hoe er wordt gestuurd op bevindingen en of de hiervoor beschreven afwijkingen van deze regels ('explains') in voldoende mate worden beargumenteerd. KPMG rapporteert over de uitkomst van deze toetsen.

De gedelegeerd opdrachtgever, het Agentschap BPR en de stuurgroep Operatie BRP krijgen daarmee de beschikking over onafhankelijk opgestelde rapportages over de codekwaliteit.

#### **Afbakening**

De kwaliteitsnorm is integraal van toepassing op code die door project O&R zelf is geschreven en die bedoeld is om in productie te gaan. De volgende code wordt buiten beschouwing gelaten:

- de broncode van de componenten die worden aangeduid als 'de BRP generatoren' (de norm is dus wel van toepassing op met deze generatoren gegenereerde code)<sup>3</sup>;
- third party libraries alsmede code gegenereerd door deze libraries<sup>4,5</sup>;
- twee specifieke gevallen van code hergebruik binnen de migratiecomponenten:
  - o een door het project zelf aangepast stuk JBoss broncode;
  - o (her)gebruikte delen van bestaande GBA-V broncode<sup>6</sup>.

Ten aanzien van de norm voor beveiliging gelden enkele nuanceringen van bovengenoemde afbakening. Als er onverhoopt een "beveiligingsissue" in de hierboven

<sup>&</sup>lt;sup>2</sup> Specifiek: voor de normen 1, 2 en 6 in de tabel in sectie Normstelling. Voor de normen 3, 4, 5 en 7 kan de regel 'Pas toe of leg uit' niet per individuele afwijking worden toegepast, aangezien het daar gaat om percentages die worden gemeten over het geheel van de code. Voor 3, 4, 5 en 7 kan nog wel gelden dat bepaalde delen van de code worden uitgesloten van de norm. Daar hoort dan vanzelfsprekend ook een adequate uitleg bij.

<sup>&</sup>lt;sup>3</sup> Gebaseerd op de voorlopige aanname dat de BRP-generatoren niet worden overgedragen aan het Agentschap BPR. Als deze aanname in de loop van het project wijzigt, volgt een impactanalyse en wordt op basis van de impact een definitief besluit hieromtrent genomen.

<sup>&</sup>lt;sup>4</sup> Zowel source code als (na compilatie in te voegen) byte code.

<sup>&</sup>lt;sup>5</sup> Inclusief mogelijk nog te selecteren libraries die worden ingezet voor de realisatie van beheerfunctionaliteit.

<sup>&</sup>lt;sup>6</sup> Motivatie voor de gekozen oplossingen en onderbouwing dat de risico's hiervan beperkt zijn zal worden opgenomen in SAD of Technische Ontwerpdocumentatie.

opgesomde code-onderdelen voorkomt, dan zal daar op de volgende manieren mee worden omgegaan:

- In geval van third party libraries:
  - 1. Voor het eerste gebruik van een library wordt deze getoetst op veiligheidsissues. Alleen libraries waarin geen "beveiligingsissues" voorkomen mogen worden gebruikt.
  - 2. Als gedurende het gebruik alsnog een "beveiligingsissue" wordt ontdekt dan volgt een afweging met als mogelijke uitkomsten:
    - a. de library wordt als 'bad practice' bestempeld en dus niet gebruikt, of;
    - b. in overleg met de beveiligingsfunctionaris van Agentschap BPR maakt het project de afweging dat het risico (bijvoorbeeld in het licht van de architectuur van de BRP) toch acceptabel is. Dan kan de library met een bijbehorende toelichting in het SAD alsnog gebruikt (blijven) worden.
- In geval van hergebruikte broncode dient het issue, voor zover in het zelf aangepaste deel is ontstaan, ofwel te worden opgelost, ofwel te worden voorzien van een goede 'explain'. Voor hergebruikte delen van de GBA-V broncode wordt de gedragslijn gevolgd die Agentschap BPR hanteert voor de GBA-V broncode en zal voor de aanpassing hiervan een beroep gedaan worden op Agentschap BPR.

Voor de broncode van de BRP generatoren gelden deze speciale eisen niet omdat deze code nooit in productie gaat, ze is geen onderdeel van de BRP-voorziening maar een hulpmiddel dat gebruikt wordt bij de voorbrenging.

#### **Normstelling**

De normen zijn vastgesteld zoals beschreven in onderstaande tabel.

Nr	Aspect	Norm
1	Aantal blocker of critical issues	0 (nul, geen)
2	Aantal issues ten aanzien van	0 (nul, geen)
	veiligheid en betrouwbaarheid	
3	Testdekking op productiecode	Minimaal 80%
4	Documentatie publieke API	Minimaal 95%
5	Code duplicatie	Maximaal 4%
6	Cyclische afhankelijkheden	0 (nul, geen)
7	Rule Compliance Index	Minimaal 97%

De te hanteren meetmethode per aspect is onderdeel van de norm, en is beschreven in bijlage 1 aan het eind van dit document.

"Explains" maken geen deel uit van de telling ten behoeve van de normen 1 tot en met 6. Ten aanzien van norm 7 wordt de specifieke bijdrage van de issues die de "Explains" veroorzaken in de berekening van de Rule Compliance Index in kaart gebracht, de berekening van de index wordt voor deze bijdrage gecorrigeerd door de door "Explains" veroorzaakte bevindingen niet in de telling mee te nemen.

Norm nummer 7 is er op gericht om te borgen dat het totaal aantal issues (inclusief het deel met een 'explain') proportioneel blijft ten opzichte van de omvang van de code.

In dit normenkader worden uitsluitingen van aangewezen delen van de code voor specifieke normen vastgelegd. Aangewezen delen betreffen de stukken code zoals benoemd in de afbakening en de markeringen ten behoeve van de "explains". Deze uitsluitingen worden door middel van een technische markering in de code aangebracht ten behoeve van de gebruikte tooling. Deze technische markering kan op zichzelf ook leiden tot een afwijking van een regel als genoemd in Bijlage 2. Deze markeringen tellen niet mee bij tellingen ten behoeve van alle normen (inclusief norm 7) en behoeven geen specifieke "explain". De algemene verantwoording is het technisch mogelijk maken van metingen van de codekwaliteit op basis van het normenkader.

#### Omgang met uitkomsten beoordelingen en toetsen

Bij beoordelingen (toetsing bij opstellen code, interne reviews en testen) en toetsen (door KPMG) zullen bevindingen ontstaan. Deze worden primair besproken binnen het ontwikkelteam, dat bepaalt hoe de bevinding af te handelen. Als de bevinding terecht wordt bevonden, wordt het werk voor het herstellen van de bevinding geschat en ingepland.

Als er discussie ontstaat over het al dan niet terecht zijn van een bevinding of over de wijze waarop of het tempo waarin deze moet worden opgelost, gelden vijf escalatieniveaus:

- 1. Ontwikkelteam (waaronder de scrum master)
- 2. Teamleider en domeinarchitect
- 3. Projectleider O&R
- 4. Gedelegeerd opdrachtgever Operatie BRP
- 5. Stuurgroep

Bij escalatieniveau's 2 tot en met 4 stemt het project af met Agentschap BPR.

Allereerst wordt getracht de discussie binnen het team op te lossen. De scrum master is onderdeel van het team met als speciale verantwoordelijkheid het borgen van het samenwerkingsproces. Als het team geen oplossing kan vinden wordt het issue aan de teamleider en domeinarchitect voorgelegd. De volgende escalatiestap is de projectleider O&R. Deze kan eventueel de lead architect om advies vragen. Als ook na afstemming met projectleider O&R de discussie niet tot afsluiting komt, wordt de bevinding voorgelegd aan de gedelegeerd opdrachtgever die het finale besluit neemt. Deze kan eventueel besluiten om KPMG (Quality Assurance) om advies te vragen of om het onderwerp voor te leggen aan de stuurgroep.

Mogelijk vormt een afwijking aanleiding tot aanpassing van het normenkader. De besluitvorming daarover is de verantwoordelijkheid van de gedelegeerd opdrachtgever Operatie BRP. Het opstellen van een nieuwe versie van het normenkader vindt plaats volgens het proces dat eerder beschreven onder "Vaststelling en beheer van de norm".

Bijlage 1: Meetmethoden

Nr	Aspect	Meetmethode
1	Aantal blocker of critical issues	Indicatoren 'blocker' en 'critical' in SonarQube versie 4.4 op basis van de door project O&R op 1 december 2014 afgestemde set Findbugs versie 3.0, PMD versie 2.2 en Checkstyle versie 2.1.1 regels. De complete regelset is opgenomen in bijlage 2.
2	Aantal issues ten aanzien van veiligheid en betrouwbaarheid	Findbugs, PMD en Checkstyle regels die betrekking hebben op veiligheid en betrouwbaarheid. Bijlage 2 bevat per regel een aanduiding of deze betrekking heeft op veiligheid of betrouwbaarheid.
3	Testdekking op productiecode	De norm geldt voor twee delen: het geheel van BRP-code en het geheel van Migratie-code. De norm geldt voor zowel line coverage als branch coverage.
		Voor de BRP-code wordt Cobertura versie 1.6.3 ingezet voor coverage meting, voor de Migratie-code Jacoco versie 2.3.
		Deze norm niet van toepassing op gegenereerde code.
		Toelichting: Gegenereerde code gebruikt een standaard patroon dat meerdere malen wordt herhaald. Daarom worden uit efficiency overwegingen alleen unit tests gemaakt voor het template en niet voor elke instantie daarvan in de code. Omdat de meting gebeurt op basis van de code en de tooling de bovengenoemde nuance niet kan meenemen wordt gegenereerde code niet meegeteld.
4	Documentatie publieke API	Indicator 'Public documented API' in SonarQube
5	Code duplicatie	Indicator 'Duplications' in SonarQube.
		De BRP software wordt gebouwd met behulp van code generatoren en zoveel mogelijk op basis van generieke patronen. Deze combinatie resulteert in en grotere hoeveelheid code duplicatie dan als deze met de hand geschreven wordt. Deze norm is daarom niet van toepassing op gegenereerde code.
6	Cyclische afhankelijkheden	Indicator 'Package cycles' in SonarQube.
		Een aantal cyclische afhankelijkheden wordt veroorzaakt door architectuurkeuzes, met name in de code delen "BRP Algemeen Model" (expressietaal en het model zelf). Deze cyclische afhankelijkheden zullen door het project worden aangewezen en vallen buiten de norm en tellen niet mee in issue tellingen en explains. Het Software Architectuur Document licht de architectuurkeuzes toe. Buiten deze specifieke categorie cyclische afhankelijkheden geldt de norm 0 in combinatie met "pas toe of leg uit".

Nr	Aspect	Meetmethode	
7	Rule Compliance	De RCI wordt berekend aan de hand van de indicatoren	
	Index	blocker, critical, major, minor uit SonarQube.	
		gewogen aantal issues =  10 × aantal blocker issues +5 × aantal critical issues + 3 × aantal major issues +aantal minor issues  RCI =  (1- (gewogen aantal issues/aantal regels code) )×100%	

## **Bijlage 2 Regelset**

Onderstaande tabel geeft omschrijvingen en categorieën bij de regels die onderdeel uitmaken van de norm. Bron: bestand 'sonar-java-profiel-OperatieBRP.xml' d.d. 1 december 2014.

In dit normenkader worden uitsluitingen van aangewezen delen van de code voor specifieke normen vastgelegd. Deze uitsluitingen worden door middel van een technische markering (zoals //NOSONAR, CHECKSTYLE:OFF en NOPMD) in de code aangebracht ten behoeve van de gebruikte tooling,. Deze technische markering kan op zichzelf ook leiden tot een afwijking van bijvoorbeeld de hieronder genoemde drie regels. Deze markeringen tellen niet mee bij tellingen ten behoeve van alle normen (inclusief norm 7) en daarom maken deze genoemde drie regels geen onderdeel uit van het normenkader, evenals andere regels die dezelfde situatie veroorzaken.

Het gaat om de volgende regels:

- Avoid use of //NOSONAR marker (Categorie SECURITY)
- CHECKSTYLE:OFF suppression comment filters should not be used (Categorie MAINTAINABILITY)
- NOPMD suppression comment filters should not be used (Categorie MAINTAINABILITY)

Om die reden maken deze regels geen onderdeel uit van de norm.

Regel	Categorie	Configuratiecode
Avoid cycle between java packages	CHANGEABILITY	squid:CycleBetweenPackages
Avoid Duplicate Literals	CHANGEABILITY	pmd:AvoidDuplicateLiterals
Bad practice - Fields of immutable classes should be final	CHANGEABILITY	findbugs:JCIP_FIELD_ISNT_FINAL_IN_IMMUTABLE_CLASS
Bad practice - Superclass uses subclass during initialization	CHANGEABILITY	findbugs:IC_SUPERCLASS_USES_SUBCLASS_DURING_INITIALIZATION
Class Fan Out Complexity	CHANGEABILITY	checkstyle:com.puppycrawl.tools.checkstyle.checks.metrics.ClassFanOutComplexityCheck
Correctness - Class defines field that masks a superclass field	CHANGEABILITY	findbugs:MF_CLASS_MASKS_FIELD
Default Comes Last	CHANGEABILITY	checkstyle:com.puppycrawl.tools.checkstyle.checks.coding.DefaultComesLastCheck

Design For Extension	CHANGEABILITY	checkstyle:com.puppycrawl.tools.checkstyle.checks.design.DesignForExtensionCheck
Dodgy - Ambiguous invocation of either	CHANGEABILITY	checkstyle.com.puppycrawi.toois.checkstyle.checks.design.designForExtensionCheck
an inherited or outer method	CHANGEABILITY	findbugs:IA_AMBIGUOUS_INVOCATION_OF_INHERITED_OR_OUTER_METHOD

instead?) RELIABILITY findbugs:RU_INVOKE_RUN	on a thread (did you mean to start it		
	instead?)	RELIABILITY	findbugs:RU_INVOKE_RUN

Multithreaded correctness - Method		
calls Thread.sleep() with a lock held	RELIABILITY	findbugs:SWL SLEEP WITH LOCK HELD
Multithreaded correctness - Method		
does not release lock on all exception		
paths	RELIABILITY	findbugs:UL_UNRELEASED_LOCK_EXCEPTION_PATH
Multithreaded correctness - Method		
does not release lock on all paths	RELIABILITY	findbugs:UL_UNRELEASED_LOCK
Multithreaded correctness - Method		
spins on field	RELIABILITY	findbugs:SP_SPIN_ON_FIELD
Multithreaded correctness - Method		
synchronizes on an updated field	RELIABILITY	findbugs:ML_SYNC_ON_UPDATED_FIELD
Multithreaded correctness - Mismatched		
notify()	RELIABILITY	findbugs:MWN_MISMATCHED_NOTIFY
Multithreaded correctness - Mismatched		
wait()	RELIABILITY	findbugs:MWN_MISMATCHED_WAIT
Multithreaded correctness - Monitor		
wait() called on Condition	RELIABILITY	findbugs:DM_MONITOR_WAIT_ON_CONDITION
Multithreaded correctness - Mutable		
servlet field	RELIABILITY	findbugs:MSF_MUTABLE_SERVLET_FIELD
Multithreaded correctness - Naked notify	RELIABILITY	findbugs:NN_NAKED_NOTIFY
Multithreaded correctness - Possible		
double check of field	RELIABILITY	findbugs:DC_DOUBLECHECK
Multithreaded correctness - Static		
Calendar	RELIABILITY	findbugs:STCAL_STATIC_CALENDAR_INSTANCE
Multithreaded correctness - Static		
DateFormat	RELIABILITY	findbugs:STCAL_STATIC_SIMPLE_DATE_FORMAT_INSTANCE
Multithreaded correctness -		
Sychronization on getClass rather than		
class literal	RELIABILITY	findbugs:WL_USING_GETCLASS_RATHER_THAN_CLASS_LITERAL
Multithreaded correctness -		
Synchronization on Boolean could lead		
to deadlock	RELIABILITY	findbugs:DL_SYNCHRONIZATION_ON_BOOLEAN
Multithreaded correctness -		
Synchronization on boxed primitive		
could lead to deadlock	RELIABILITY	findbugs:DL_SYNCHRONIZATION_ON_BOXED_PRIMITIVE

Multithreaded correctness -		
Synchronization on boxed primitive		
values	RELIABILITY	findbugs:DL_SYNCHRONIZATION_ON_UNSHARED_BOXED_PRIMITIVE
Multithreaded correctness -		
Synchronization on field in futile attempt		
to guard that field	RELIABILITY	findbugs:ML_SYNC_ON_FIELD_TO_GUARD_CHANGING_THAT_FIELD
Multithreaded correctness -		
Synchronization on interned String could		
lead to deadlock	RELIABILITY	findbugs:DL_SYNCHRONIZATION_ON_SHARED_CONSTANT
Multithreaded correctness -		
Synchronization performed on		
java.util.concurrent Lock	RELIABILITY	findbugs:JLM_JSR166_LOCK_MONITORENTER
Multithreaded correctness - Synchronize		
and null check on the same field.	RELIABILITY	findbugs:NP_SYNC_AND_NULL_CHECK_FIELD
Multithreaded correctness -		
Unconditional wait	RELIABILITY	findbugs:UW_UNCOND_WAIT
Multithreaded correctness -		
Unsynchronized get method,		
synchronized set method	RELIABILITY	findbugs:UG_SYNC_SET_UNSYNC_GET
Multithreaded correctness - Using		
notify() rather than notifyAll()	RELIABILITY	findbugs:NO_NOTIFY_NOT_NOTIFYALL
Multithreaded correctness - Wait not in	DELLABILITY	C. II. MA NOT IN LOOP
loop	RELIABILITY	findbugs:WA_NOT_IN_LOOP
Multithreaded correctness - Wait with	DELLADILITY	finally, resTIM, TMO, LOCK, MAIT
two locks held	RELIABILITY	findbugs:TLW_TWO_LOCK_WAIT
Mutable Exception	RELIABILITY	checkstyle:com.puppycrawl.tools.checkstyle.checks.design.MutableExceptionCheck
Negating the result of		
compareTo()/compare()	RELIABILITY	findbugs:RV_NEGATING_RESULT_OF_COMPARETO
No Clone	RELIABILITY	checkstyle:com.puppycrawl.tools.checkstyle.checks.coding.NoCloneCheck
No Finalizer	RELIABILITY	checkstyle:com.puppycrawl.tools.checkstyle.checks.coding.NoFinalizerCheck
Nonnull field is not initialized	RELIABILITY	findbugs:NP_NONNULL_FIELD_NOT_INITIALIZED_IN_CONSTRUCTOR
Non-transient non-serializable instance		
field in serializable class	RELIABILITY	findbugs:SE_BAD_FIELD
Parameter Assignment	RELIABILITY	checkstyle:com.puppycrawl.tools.checkstyle.checks.coding.ParameterAssignmentCheck

Performance - Explicit garbage		
collection; extremely dubious except in		
benchmarking code	RELIABILITY	findbugs:DM GC
Read of unwritten public or protected		<u> </u>
field	RELIABILITY	findbugs:NP_UNWRITTEN_PUBLIC_OR_PROTECTED_FIELD
Self assignment of local rather than		
assignment to field	RELIABILITY	findbugs:SA_LOCAL_SELF_ASSIGNMENT_INSTEAD_OF_FIELD
Sequence of calls to concurrent		<b>.</b>
abstraction may not be atomic	RELIABILITY	findbugs:AT_OPERATION_SEQUENCE_ON_CONCURRENT_ABSTRACTION
String Buffer Instantiation With Char	RELIABILITY	pmd:StringBufferInstantiationWithChar
String Literal Equality	RELIABILITY	check style: com. puppy crawl. tools. check style. checks. coding. String Literal Equality Check
Switch statement found where default		
case is missing	RELIABILITY	findbugs:SF_SWITCH_NO_DEFAULT
Switch statement found where one case	DELLA DILLETA	C. II. CE CHITCH FALLTHROUGH
falls through to the next case Unchecked/unconfirmed cast of return	RELIABILITY	findbugs:SF_SWITCH_FALLTHROUGH
value from method	RELIABILITY	findbugs:BC_UNCONFIRMED_CAST_OF_RETURN_VALUE
	RELIABILITY	findbugs:URF UNREAD PUBLIC OR PROTECTED FIELD
Unread public/protected field	<b>†</b>	
Unused public or protected field	RELIABILITY	findbugs:UUF_UNUSED_PUBLIC_OR_PROTECTED_FIELD
Unwritten public or protected field	RELIABILITY	findbugs:UWF_UNWRITTEN_PUBLIC_OR_PROTECTED_FIELD
Useless Operation On Immutable	RELIABILITY	pmd: Useless Operation On Immutable

# Bijlage 3: ingevulde NFR's

De volgende NFR's worden volledig ingevuld door de norm:

Code	Requirement
RD-OH-001	De broncode voldoet aan codeerrichtlijnen en wordt geautomatiseerd getest op deze codeerrichtlijnen. De gehanteerde codeerrichtlijnen zijn representatief voor binnen het vakgebied gebruikelijke richtlijnen voor professionele softwareontwikkeling.
RD-BEV-001	95% van de methodes van publieke interfaces is gedocumenteerd.
